APPLICATION- and PRODUCTDATASHEET

Fluna SDR

SILENCER-CLEANING SET

Special Cleaning Set for the cleaning of silencers of all kind.

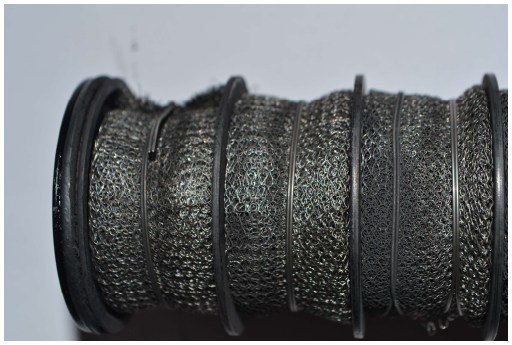
Fluna SDR is a special cleaner and degreaser for the automatic cleaning of silencers. **Fluna SDR** automatically cleans metal surfaces of powdery debris and combustion residues.

Properties :

- ✓ Automatically cleans residue-free and degreases at the same time
- ✓ Easy to use, good material compatibility

Application :

Empty half of the enclosed concentrate bottle into the empty PVC case and dilute this concentrate in the ratio 1: 3 with water, which gives 500ml cleaning solution. The whole content of the concentrate bottle is sufficient for 1 liter cleaning solution, that is 2 applications. If possible, dismantle the silencer and place it in the can with the detergent mixture. Non-dismountable silencers can be placed in the cleaner as a whole, or filled. In this case, the filling has to be done from the front-side. The back-side must be closed tight by using a silicone- or rubber plug to avoid that the cleaning mixture leaks out. The exposure time is between 0,5 and 8 hours, depending on the degree of soiling. Warming up the cleaning mixture up to 40°C increases the cleaning efficiency and redudes the exposure time. The cleaning takes place automatically and can be supported by shaking. A black / brown discoloration of the cleaning solution becomes visible when effective.



Silencer BEFORE cleaning

FLUNA TEC & RESEARCH GMBH
