Silencer Cleaning Kit

The Fluna Tec silencer cleaner quickly and effectively removes dirt, burnt and powder residues. The cleaning takes place automatically by soaking or with the added, soaked cloth.

PROPERTIES:

- Self-cleaning
- Without solvents
- Material compatible

INSTRUCTIONS:

1. Fill half of the concentrate liquid bottle into the empty PVC bottle and dilute this concentrate in the ratio 1: 3 with water, which results in 500ml cleaning mixture. The whole content of the concentrate bottle is sufficient for 1-liter cleaning solution, that is 2 applications.
2. Disassemble the silencer if possible and place the silencer in the cleaning mixture bottle. Non-dismountable silencers can be placed in the cleaning mixture as a whole. The exposure time is 2 to 8 hours depending on the degree of soiling. The cleaning takes place automatically and can be supported by shaking. A black discoloration of the cleaning mixture becomes visible during the cleaning process.
3. After cleaning, rinse the silencer vigorously with clean water. By shaking and tapping, dirt can still loosen.
4. Finally, dry the silencer before reassembling it. Check material compatibility before use!
